SUMMARY

Frontend Engineer with 4+ years building production-grade web applications across fintech, logistics, and capital markets. Experienced delivering end-to-end frontend solutions using React, TypeScript, and GraphQL within lean cross-functional teams.

EXPERIENCE

Software Engineer II Koda

February 2021 - June 2025, Jakarta, Indonesia

- Delivered frontend across 5 outsource clients — Kargo, Hukumku, infinID, Trimegah, and Sinartama — spanning logistics TMS, legal tech, fintech, and equity trading domains, within lean cross-functional teams of 4–9 members.
- Built and maintained a last-mile logistics TMS for Kargo (kargo.tech) using React 17, TypeScript, GraphQL (Apollo), and Ant Design; implemented payables/receivables management, shipment monitoring, bulk CSV upload, and wrote unit tests with React Testing Library.
- Developed a multi-step HELOC loan application for infinID (infinid.id) using React 18, Redux Toolkit, and TypeScript; integrated KYC selfie verification via VIDA, Google Maps property search, PDF viewer, and OTP authentication with full mobile-responsive support.
- Engineered a cross-platform desktop stock trading application for Trimegah using Tauri, React 18, Vite, and Zustand; implemented real-time orderbook, stock/mutual fund buy-sell order flows, watchlist, and live data streaming via NATS WebSocket.
- Built an internal shareholder analytics dashboard for Sinartama using React 18, Material UI, and Chart.js; delivered advanced analytics (top-10 ownership, free float, transaction charts), PDF export, and client management with email recipient configuration.
- Contributed to a legal tech platform for Hukumku using React 18, Zustand, and TanStack Query; built user verification flow, notification system, profile settings, and home dashboard with mobile-responsive layout.

PROJECT

Trimegah TrimaPlus Trading App

Koda (outsource @ Trimegah) • October 2023 - August 2024

- Engineered a cross-platform desktop trading app using Tauri (Rust + React) supporting **2 asset classes**: stocks and mutual funds.
- Built real-time orderbook and buy/sell/amend/withdraw order flows with **4 order validity types** (Day, GTD, GTC, advanced order) via NATS WebSocket.
- Delivered mutual fund features across **3 transaction types**: buy, sell, and switch orders with NAV-based calculations and order history.
- Optimized live data streaming performance by improving NATS reconnection logic and reducing orderbook table re-render on high-frequency ticks.

Hukumku Web Platform

Koda (outsource @ Hukumku) • www.hukumku.id • July 2023 - October 2023

- Built **5 core user flows**: registration, OTP verification, KYC document upload, profile settings, and home dashboard for a legal tech platform.
- Developed a notification system and verification status flow handling **3 user states**: pending, approved, and rejected.
- Delivered full mobile-responsive layout across all pages with SASS and React Router v6.

infinID HELOC Web App

Koda (outsource @ infinID) • infinid.id • December 2022 - July 2023

- Developed a **7-step** multi-step HELOC loan application flow covering pre-qualification, property, income, identity, and document submission.
- Integrated **3 third-party services** — VIDA biometric selfie, Brankas open banking, and Google Maps autocomplete — into a single application form.
- Built a custom file uploader supporting **multi-document upload, PDF preview, and mobile camera capture** with format and size validation.
- Implemented Facebook Pixel and Google Analytics tracking across **all public-facing pages**.

Kargo Last-Mile TMS

Koda (outsource @ Kargo) • January 2022 - October 2022

- Maintained a last-mile TMS handling shipment routing, delivery orders, and transporter/fleet/driver profiles across **200+ commits** over a 9-month engagement.
- Implemented payables and receivables modules with multi-tab Delivery Order review, payment action flows, and adjustment forms covering **3 transporter payment types** (dedicated, on-call, shipper).
- Built bulk CSV upload/download for **5 data entities** (routing, transporter, fleet, driver, contract) with validation and error handling.
- Wrote unit tests for payable modules using React Testing Library, contributing to a **test-coverage CI pipeline**.

EDUCATION

Bootcamp Certificate, Full Stack JavaScript Development

HACKTIV8. • Jakarta. • 2020

- JavaScript, HTML, CSS, Git, React, React Native, Vue.js, Node.js, Express.js, PostgreSQL, MongoDB, Sequelize, Apollo Server, Apollo Client, Firebase, AWS, Agile

SKILLS

Hard Skills: React, TypeScript, JavaScript, HTML, CSS, SASS, GraphQL, REST API, Redux Toolkit, Zustand, TanStack Query, Tailwind CSS, Ant Design, Material UI, React Hook Form, Git, Vite, Webpack, Jest, React Testing Library, Firebase, Sentry, Tauri, NATS WebSocket.

Soft Skills: Cross-functional Collaboration, Remote Communication, Problem Solving, Adaptability.
